March 28th, 2011

To Whom it may concern,

With regards to the Tohoku-Kanto Earthquake occurred on March 11th, 2011, we appreciate very much your concern to our factory. Further, we heartily convey our gratitude for many encouraging phone calls and e-mails.

We wish to report our status, as of March 28th, of damage caused by the disaster. Calibration for machining equipment, etc. has almost been completed and our production capabilities have recovered to normal. Further, manufacturing of parts at our sub-contractors, whose damages were quite lot, has been shifted to other vendors or has continued their business temporary at our workshop.

Further, after our investigation into damage on our casting supplier, who offers special casting material, we found it not so huge than a report received previously. Some facilities of them have already been repaired and they started production partly along with testing. It requires further time for full production but recovery work has been certainly in process.

Due to shortage of fuel, not sufficient rehabilitation on infrastructure, we may cause any inconvenience to delivery but wish your kind understanding and support.

We will keep reporting the situation upon progress.
