

## Model 02-G & Model 02-C

**LOW AND MEDIUM PRESSURE**

### ANGLE TYPE CONTROL VALVES

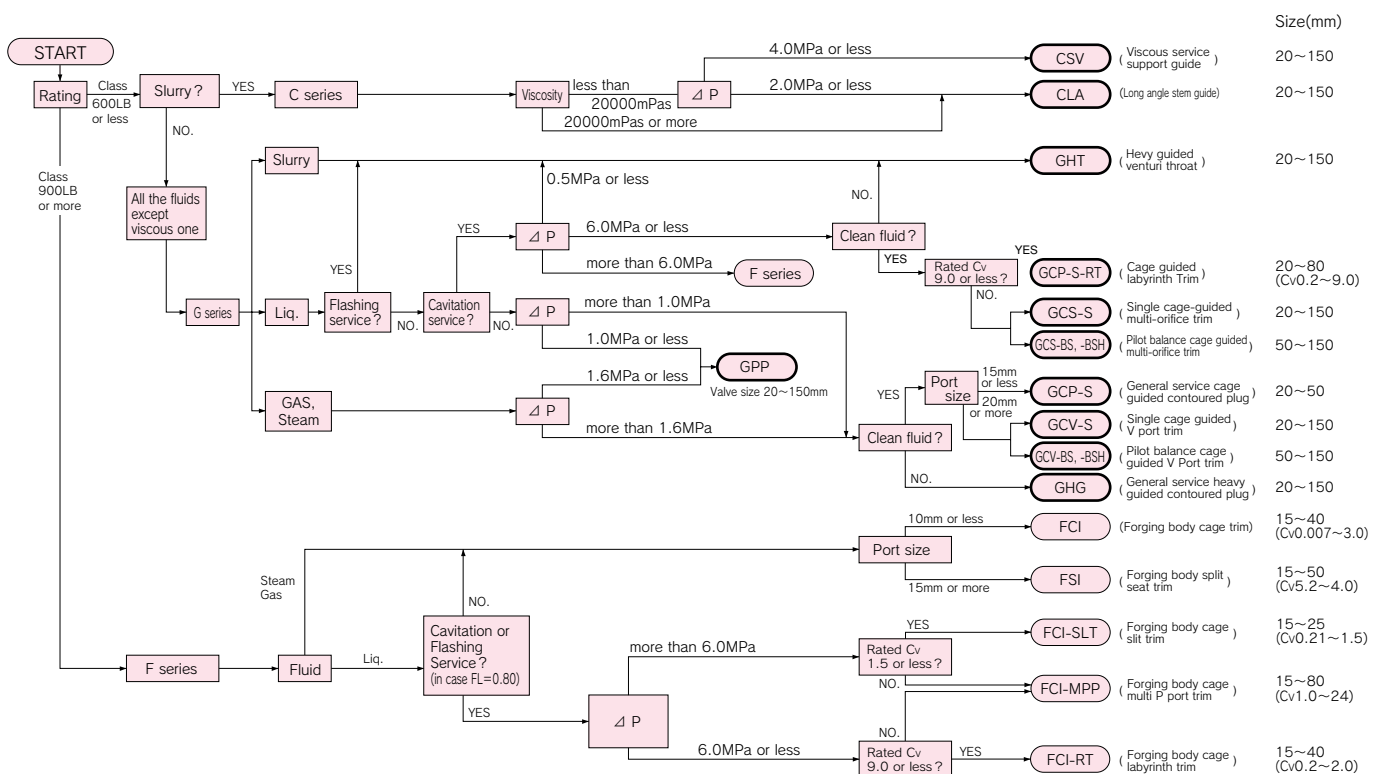

Angle-type control valves are indispensable to control fluid of high differential pressure, slurry, high viscosity or adhesive. They are provided with a number of features such as low resistance of passage, antiwear quality within the valve, and easy maintenance and inspection.

**Model 02** series valves are provided as the general-purpose angle valves to be used under various service conditions such as high temperature, high pressure, high differential pressure, extremely low temperature and low noise, and used for various industries and service such as power, chemical and water process plants. You can select optimum valves from a variety of models in this series.

## 1. SELECTION OF VALVE TYPE

**02  
G,C**

The flowchart of angle type control valves

- [Notes]**
- For the specifications exceeding this range, be sure to contact with our sales office.
  - When you need steam jackets, select one of C-series valves.
  - For low noise valve on gas service, select GCS-S, GCS-BS or GCB-BSH type.
  - As for the details of F-series valves, refer to the other catalog (Bulletin No.MCE-B1202).

## 2. FEATURES

### G Series

#### GPP Type (Conventional)

This is the general-purpose angle valve to be used for all the low-pres-sure fluids such as liquid, gases, steam and slurry.

#### GHG Type

(For medium and high pressure)

This type employs the heavy guide to bear the fluid of high differential pressure and is well suited to the gas or steam of high differential pressure.

#### GHT Type

(For flashing fluids of high differential pressure)

In addition to the heavy guide, this type is provided with a sleeve on the internal wall of the outlet.

It is well suited to the fluids of high pressure or high differential pressure accompanied with flashing or cavitation.

This type is provided with the reduced port as a standard feature.

#### GCP-S GCV-S Type GCS-S

(For clean fluid and high differential pressure)

This is cage guided type for high differential pressure.

It employs the cage trim enable for wide selection such as, v port trim or low noise application.

GCP type applies for port size 15mm or less and GCV type for 20mm and over with both type single seat.

Further, GCS type of multi-holes cage type can be available. Also, GCP-S-RT type of labyrinth trim can be available. GCV-S type for On-Off application.

#### GCV-BS, -BSH GCS-BS, -BSH Type

(For clean fluid and high differential pressure)

This is Seal Ring Balanced cage guided type. Utilizing the Seal Ring balance type, very limited seat leakage can be realized link single seat valves with installing small actuator like double seat valves.

-BS type applies for normal temperature and -BSH type for high temperature.

Body size available from 50mm or more.

GCS-BS or GCS-BSH type, which have multi-holes in outer cage, also available.

### C Series

#### CSV Type

(For high viscous fluid and slurry)

This is of split body type with pocketless structure and also provided with the support guide.

Therefore, the fluid does not stay on the upper part of the guide so that it is not adhered. This type is well suited to high viscous fluids and slurry. It can be mounted with various jackets.

The ceramic and tungsten carbide plug and seat-ring are also available for this valve.

#### CLA Type

(For high viscous fluid and high concentration of slurry)

This type has the bent pipe with a large bending radius as the fluid passage on the inlet side and the seat-ring mounted on the same spherical surface as the inside wall of the valve body to eliminate the pocket part inside of the body.

Therefore, it has very little fluid resistance to be well suited to the service of high viscous fluids.

It is available with butting surface of body inside or with jacket body.

Purge construction can be provided according to customer's request.

## 4. MAIN MATERIALS

### 1 Typical Combination of Materials

Parts Name	Materials			
	WCB	WC1, WC6, WC9, C5	CF8	CF8M
Body, Bonnet				
Trim	SUS 316 SUS 440B		SUS 316	
Stud Bolt & Nut	A193 GrB7/S45C (H)		A193 GrB8 CL2/SUS304	

- [Notes] (1) This table shows typical combination of materials. The combination may be subject to change by pressure, temperature and kind of fluid.  
 (2) Trim materials may be casting instead of bar materials in some cases.  
 (3) For trim of CSV, super-hard or special materials are available. Please contact our sales office.

### 2 Applicable Pressure and Temperature of CoCr Alloy Hard Facing for Trim

#### ■ GPP, GHT, GHG and C series

Valve type	Classification	A	B	C	D	E
GPP, GHT, GHG C series		Not Required	CoCr Alloy Seat	CoCr Alloy Face	CoCr Alloy Face + GGS	CoCr Alloy Seat + GGS

- Seat-ring of on-off control valve and of throttling control valve for tight shut off (T.S.O.) is hard faced at the area of CoCr Alloy Seat and over.
- In case of flashing or cavitation or saturated steam service, if temp. range is  $-20\text{ °C} \sim 400\text{ °C}$ , SUS440B is most suitable.
- Whichever fluid is applied, at  $350\text{ °C}$  and over, guide bushing and guide post is hard faced by CoCr Alloy treatment.
- In case of saturated steam, if inlet pressure is  $0.69\text{ MPaG}$  ( $7\text{ kgf/cm}^2\text{G}$ ) and over, seat-ring is hard faced at the area of CoCr Alloy Seat and over.
- For single seated type, if shut-off pressure is  $\leq 1.37\text{ MPaG}$  ( $14\text{ kgf/cm}^2\text{G}$ ), seat-ring is hard faced at the area of CoCr Alloy Seat and over.
- If pressure rating is  $\geq \text{JIS 40K}$  or  $\geq \text{ASME 600}$ , seat-ring is hard faced at the area of CoCr Alloy Seat and over.

#### ■ GCP-S, GCV-S, GCS-S, GCV-BS, GCV-S-BSH, GCS-BS, GCS-BSH

##### SUS316 (SCS14A), SUS316L (SCS16A)

CoCr Alloy Hard Facing	CoCr Alloy Seat	CoCr Alloy Face	CoCr Alloy Seat	CoCr Alloy Face

- [Notes] (1) Unit of off-balance is kPaG (kgf/cm<sup>2</sup>G).  
 (2) For the 650 actuator and on-off control, the minimum off-balance is 40 kPaG (0.4kgf/cm<sup>2</sup>G).  
 (3) The Max. available differential pressure value in this table indicates the static shutoff pressure. If the differential pressure is large, it may cause unstable action, erosion or cavitation. Therefore, for sizing, be sure to contact our sales office.  
 (4) For flow direction of flow-to close, spring range 20 ~ 98kPaG (0.2 ~ 1.0kgf/cm<sup>2</sup>G) is not available.  
 (5) The frame "□" indicates the standard combination of the body (at full port) and actuator.  
 (6) Off-balance 100 kPaG (1.0kgf/cm<sup>2</sup>G) is applied only to direct action for the actuator size N24, N28, N33S and N40.  
 (7) This table shows the value as to standard gland packing (P4519 + V7010).  
 (8) When tight shut off (T.S.O.) is specified for contoured or V-port plug, allowable shut-off pressure is selected to multiply the value in above table by 1/1.2.  
 (9) The above table is not available for bellows bonnet valve.  
 (10) When "Use no oil", Bellow Seal Bonnet or special Gland Packing is required Off-balance 120kPaG (1.2kgf/cm<sup>2</sup>G) is not applicable.

	80(0.8)							2.94(30)	1.76(18)	1.17(12)	0.83(8.5)
	100(1.0)							3.76(38)	2.23(22)	1.47(15)	1.04(10)

- [Notes]** (1) Unit of off-balance is kPaG (kgf/cm<sup>2</sup>G) .  
 (2) The frame " " indicates the standard combination of the body (at full port) and actuator.  
 (3) Off-balance 100 kPaG (1.0kgf/cm<sup>2</sup>G) is applied only to direct action for the actuator size N24, N28, N33S and N40.  
 (4) This table shows the value as to standard gland packing (P4519 + V7010) .  
 (5) When tight shut off (T.S.O.) is specified for contoured or V-port plug, allowable shut-off pressure is selected to multiply the value in above table by 1/1.2.  
 (6) Please contact our sales office to allowable shut-off pressure for GCV-BS, -BSH & GCS-BS, -BSH type.  
 (7) In case of single seated type, if flow direction is F.T.C. (Flow to close), it's necessary to check with medium pressure. Please contact our sales office.  
 (8) When "Use no oil", Bellow Seal Bonnet or special Gland Packing is required Off-balance 120kPaG (1.2kgf/cm<sup>2</sup>G) is not applicable.

	100 (1.0)		9.80 (100)		6.76 (69)	5.39 (55)	4.41 (45)
650	80 (0.8)			9.80 (100)	9.61 (98)	7.64 (78)	6.37 (65)
	100 (1.0)				9.80 (100)	9.70 (99)	8.04 (82)

- [Notes] (1)   portion shows standard combination of valve Body and Actuator.  
 (2) The Unit of off-balance is kPaG (kgf/cm<sup>2</sup>G).  
 (3) On type BS, Actuator Size N40, Off-balance 80kPaG (0.8 kgf/cm<sup>2</sup>G), above Shut-off Pressure is not applicable for reverse action Type with rated travel 65mm.  
 (4) Shut-off pressure of this table shows the value only with standard gland packing. (P4519 + V7010)  
 (5) On Bellow Seal Bonnet valve, Allowable Shut-Off Pressure is differed from above table because of Bellows effective area.  
 (6) Off-Balance 120kPaG (1.2kgf/cm<sup>2</sup>G) is not applicable for Actuator N40 with rated travel 65mm.  
 (7) Actuator size N33S & N40 with Off-Balance 120kPaG (1.2kgf/cm<sup>2</sup>G) is only applicable for type CQ-BS and CQ-BSH.  
 (8) On Model 83A-BS, seat leakage class V and Off-balance 40kPaG (0.4kgf/cm<sup>2</sup>G) is not applicable.  
 On Model 83A-BSH, Off-balance is not applicable lower than 60kPaG (0.6kgf/cm<sup>2</sup>G).  
 (9) When Off-Balance is 100kPaG (1.0kgf/cm<sup>2</sup>G) on reverse action actuator size 500 ~ 650, Spring Range may differs by actuator size and valve rated travel.  
 (10) For Model 83BS, seat leakage class V and for "Use no oil" application, smallest actuator size is N33S.

	100 (1.0)			9.80 (100)			9.80 (100)		6.48 (66.0)		

- [Notes]
- (1)  portion shows standard combination of valve Body and Actuator.
  - (2) The Unit of Off-balance is kPaG (kgf/cm<sup>2</sup>G).
  - (3) Shut-off pressure of this table shows the value only with standard gland packing (P4519 + V7010).
  - (4) On Bellows Seal Bonnet valve, allowable Shut-off pressure is differed from above table.
  - (5) When "Use no oil", Bellow Seal Bonnet or special Gland Packing is required Off-balance 120kPaG (1.2 kgf/cm<sup>2</sup>G) is not applicable.
  - (6) On type GCP-S port size 15mm (1/2") or larger and type GCP-S-RT port size Cv = 3 or larger, when ANSI/FCI class V is required, Actuator size should be N28 or larger.

		RA							810	875	1155	1220	1540	1605		
150	6	DA							795	860	1015	1075	1310	1375		255
		RA							820	885	1165	1230	1550	1615		

- [Notes]** (1) As the weight, the approximate mass for a combination of ASME 300 body and the standard actuator is indicated. (Plain bonnet)  
 (2) The fin bonnet shall be used at the temperature ranging from - 20 °C to - 17 °C and at over 230 °C.

## ■ Extension Bonnet (For cryogenic service – 196 °C ~ – 20 °C )

If the temperature is under – 20 °C, the extension bonnet is used. The extension bonnet is available in two types according to the temperature, the type for the temperature range of – 100 °C and over to under – 20 °C and that for the temperature range of – 196 °C and over to under – 100 °C.

Unit : mm

Valve Size		Actuator Size	C <sub>D</sub> (DA)		C <sub>R</sub> (RA)		Approx. Weight (kg)
(mm)	(inch)		– 100°C ~ – 20°C	under – 100°C	– 100°C ~ – 20°C	under – 100°C	
20 25	3/4	N24	720	980	745	1005	35
40	1 1/2		725	990	750	1015	45
50	2		740	1000	760	1025	50
65	2 1/2	N28	750	1015	775	1035	65
80	3		860	1110	885	1135	95
100	4	N40	880	1125	900	1150	130
125	5		1245	1405	1270	1425	240
150	6		1265	1420	1285	1445	310

- [Notes] (1) For face-to-center dimension A, see P.15.  
 (2) The approximate weight indicates the weight of the ASME 300 body with the standard Tactustor which is mounted on the extension bonnet for the temperature range.  
 (3) Stainless steel SUS 304 or SUS 316 is used for extension as the standard material.  
 (4) If the fluid temperature ranges from – 20 to – 17 °C and is over 230 °C, the fin bonnet is used.

## ■ Bellows Seal Bonnet

If the fluid is combustible or poisonous and it would cause hazardous problem, the leakage of the fluid from the gland must be prevented. In this case, the bonnet with the bellows seal is used. The bellows is available in two kinds ; the formed bellows and the welded bellows. Either type is used according to the fluid conditions. (See to page 6)

### [Bellows Specification]

Atomic bellows (Welded Type)

- ① Pressure : 3.92MPaG (40kgf/cm<sup>2</sup>G) But, this is limited by temperature.
- ② Temperature : 350 °C or less
- ③ Material : SUS316L

Unit : mm

**[Note]** Above table indicates the dimension for full port size body assembly with actuator.

## 9. JACKET

It is recommended to mount the jacket for the service of highly viscous or adhesive fluids. Series C has a design available to mount a jacket and the body inside has a design not to cause the fluid to stay or adhere. If the jacket is mounted, the piping shall be two sizes larger than the valve size.

**Model 02 CLA Jacket**
